Exercises 1 to 13, 262, illustrate one of the uses of the fundamental trigonometric relations, $\tan A = \frac{\sin A}{\cos A}$ and $\sin^2 A + \cos^2 A = 1$. The study of $\cos A$ other trigonometric relations is postponed until we have had a good review of the principles of the operations with arithmetic and algebraic fractions. These principles are reviewed and extended in chapter x. Quadratic Equations in Two Unknowns 264. In exercise 1, 262, we have solved the system of equations: $(\sin B = f \cos B)$ $\sin B + \cos^2 B = 1$. In this system of equations $\sin B$ and $\cos B$ are considered as unknowns. To solve the system, $\sin B$ was eliminated by substituting $f \cos B$ in place of $\sin B$ in the second equation. This is the general method of solving a system of equations in two unknowns, of which one is linear and the other quadratic. Many problems lead to quadratic equations in two unknowns. The following problem will illustrate further the method of solution to be used in solving a system of equations in two unknowns, when one equation is of the first degree and the other of the second. ILLUSTRATIVE PROBLEM In the right triangle ABC, Fig. 172, with sides 3 and 4, to construct a line...
